Non-Mendelian inheritance is any pattern of inheritance in which traits do not segregate in accordance with

Mendel's laws. These laws describe the inheritance of traits

linked to single genes on chromosomes in the nucleus. In Mendelian inheritance, each parent contributes one of two possible alleles for a trait. If the genotypes of both

start. The HGP began officially in October 1990, but its origins go back earlier. In the mid-1980s, three scientists

independently came up with the idea of sequencing the entire human genome:

Robert Sinsheimer, then chancellor of University of California at Santa Cruz, as a way to spend \$30 million donated to his institution to build a ...
